Actually you don't really have to pass anything in as the 3rd parameter, you can simply pass NULL, because the SaveAs dialog will come up anyway. If you specify a filename in the third param, it will show up in the save as dialogs filename edit.

Oops, typo detected! ;)

```
COleVariant Filename(_T("c:\\Temp.html"));
ExecWB(OLECMDID_SAVEAS,OLECMDEXECOPT_DODEFAULT,Filename,NULL);
```

How about this:

```
COleVariant Filename(_T("c:\\Temp.html"));
```

```
ExecWB(OLECMDID_SAVEAS,OLECMDEXECOPT_DODEFAULT,Filename,NULL);
```

Hi,

In want to use the ExecWB method of the webbrowser

## Re: ExecWB and VARIANT

activeX control  
from microsoft.

```
void CWebBrowser2::ExecWB(long cmdID, long  
cmdexecopt, VARIANT* pvaIn,  
VARIANT* pvaOut)
```

I want to SaveAs a webpage using the cmdID =  
IDM\_SAVEAS.

I don't know how to initialise the VARIANT\* pvaIn variable  
to store

the pathname of the file to save the webpage. It is a  
VT\_BSTR and

pbstrVal must be initialised, but i dont know how to initialise  
a

VARIANT\*.

Please help.
