

Security, automation events and add-ons

Hi,

Visio 2003/XP Pro SP2

I'm using the automation in the timeline so I can slide the milestones back and forth and the dates change automatically.

But, I have this problem on two computers where if I lower my security to high and disable 'enable automation events' in options > security, when I start Visio, it tries to run/install all the add-ins I have, which is about 30 (and I don't know where they all came from; only a few) – everytime I start Visio. This is no good.

If I increase the security to high, then the automation doesn't work.

Does anyone know how I can get it to stop running/installing all the add-ins. It also seems to be every program I have in Desktop, where my downloads go.

Thanks a bunch,

Michele

P.S. – All the other boxes are unchecked in the security window and in Macro Security under Trusted Publishers, 'Trust all installed add-ins and templates' is not checked, but 'Trust access to Visual Basic Project' is checked.

.
