Thanks t-4-2. You've put my mind to rest with regard to the Guest account not being a threat as it's turned off. Yes, I do have Norton. I have just 37 day's left before I need to renew it. Surprisingly, this 'weak password' message has only become a recent phenomenon. So, I'll go for something else – probably back to McAfee, which is what the computer had when I purchased it.

Help!
I have three user accounts
(one is the Admin one). A
second is for

my

husband. But I seem to have
acquired a Guest user
account (may have
done this
accidentally?). Anyhow, my
antivirus keeps telling me
that this

Guest

Re: Hidden user account information

account
has a weak password. I want
to change the password so
followed the
steps to
get into this user account but
find that the only option
open to me

is

to
turn it on (it shows as off at
present).

What is making the
information for me to reset
(or even give it)
