One thing that seems to help the Vista search function is to periodically rebuild the search index. Control Panel| Classic View| Indexing Options| Advanced| Rebuild. This takes about 20 minutes if you are not otherwise using the computer keyboard & mouse; otherwise it may take several hours as the indexing runs very slowly in the background while you are active. I currently show 14,735 items in my index. I rebuild about once a month and go have lunch while it does its thing. Seems to help it stay current and accurate. Have a try at rebuilding and post back with your experience.

Cheers,

Hi Roger

I'm experiencing something like that myself, though in my case I'm using Vista Home. I'm an antiquarian bookdealer and this morning I was wanting to search my Invoices folder for all invoices to a particular individual (these all have his full name and address on them).

When I did a search for his surname (which is unique) I found 21 invoices, when I searched for his house name (also unique) I found 28 invoices, and when I searched for his village name (again unique) I found 34 invoices. There are in fact more than 34 invoices to him on my computer.

If all three searches came up with the same number of invoices, I might be able to figure out what is wrong – with them all different I'm totally at a loss.
