Malke,

you're right about the snapshots ;-)

Anyway, this (inconsistent view in the same Vista application) is not a VMWare problem, but Vista's.

Christian Kaiser wrote:

I guess that backing it up and reformatting might do, but it too 3 or 4 days to install it including all recent patches, some language installations just to get that plain empty system I would not recommend it ;) It's still a system without any non-Vista application installed (OK: MS Developer Studio).

Undoing: how can I undo a volume extension?

Hi, Christian – I'm sorry that I don't have a direct answer to your question, but I do have two suggestions:

1. VMware gives you the ability to take snapshots of virtual machines. In effect, this gives you a complete image of the vm at a specific point in time. So next time before you make any big changes, take a snapshot because restoring to the working vm is a no-brainer.
2. You might want to post your question on the VMware user forums.

Re: Inconsistent Partition Data

They are  
very active and helpful.

Good luck,

Malke
