I just switched to Office 2007 at work, and I am in the middle of a huge email merge where I send out 500 emails a day using this feature. I have done it fine three times in my old Windows 2003, but I went to go do it today with Office 2007 and Word went through and acted like it was sending it, but nothing showed up in my Sentbox or Outbox. I also got no replies or bounces....what is happening and how do I fix it?

Ask the Word experts in a Word newsgroup.
