Thank you both for replying. I replaced the power supply and system is now shutting down without restarting.

System Configuration:

HD1 – XP Pro with all updates

HD2 – Vista Ultimate with all updates

I switch OS at boot time via F10 key.

Problem:

I select Turn Off computer and system executes normal shutdown procedure. A second or two after shutting down it Restarts. If I press the Power Btn. and hold it down until the system shuts down, power remains off. This occurs using either OS so I suspect something common to both; perhaps the power supply? Any suggestions?
