{What you can't do with Ubuntu:

Run some MS or other niche programs like AutoCad. Most video games won't work with Ubuntu either so if you're into games, dual boot with XP.}

Telling half truths again 99% of windows programs do not run or even run properly,you can try to use wine but after 15 years in development they only got 10 programs to work without a problem. here a link to Wines Bug List,it is very very long

[http://bugs.winehq.org/buglist.cgi?bug\\_status=UNCONFIRMED&bug\\_status=NEW&bug\\_status=REOPENED&cmd](http://bugs.winehq.org/buglist.cgi?bug_status=UNCONFIRMED&bug_status=NEW&bug_status=REOPENED&cmd)

Support= web only, unless you pay for support or have a freetard friend

Only supported for 18 months compared to 10 years for windows,this means constantly upgrading your computers

..

Extremely poor dual monitor support

you also run the risk of being sued for Linux stealing others code,99% of there programs are reversed engineered,or an old out of date program might be given to them.take Blender there 3D program,it was given to them for free and have been hacking it to work eversence. it wasn't made for the public,it was specially made in-house program. It has a sever learning curve and again web support only,unless you pay for phone support.

There is NO free phone support for any linux OS

If your hardware maker doesn't make drivers for its product for linux they do not support it being installed on linux. again web support only,phone support is not free  
you run the risk of loosing your warrantee for using there hardware on an unsupported OS

There is NO guarantee Ubuntu will be around next year or even next month, all costs are being paid for by a millionaire who might get tired of footing all the costs and getting nothing back. Freetards don't support there OS of choice well,because its free

Or worry about:

Re: Only 16 More Days to Go

WPA and WGA raising their ugly heads,  
DRM,  
Viruses,  
Root kits,  
Spyware,  
and  
Malware.

Alias

Again all lies,there are viruses,rootkits,spyware and malware for linux,granted not alot but what do you expect for an OS that has less then 1% of the desktop market

What you can do with Windows===== Everything and anything and tons and ton of free programs too!!! far more then Linux has. Its a fact noone cares about linux and if it was any good it would have far more then 1% of the desktop market,people would rather steal windows then use linux lol

And you can get the new version of Ubuntu, Jaunty Jackalope! Get it FREE at  
<http://www.ubuntu.com/>

Not only is it free but it comes with access to thousands of free programs!

What can be done with Ubuntu?

Email  
Surf the web  
Burn CDs.  
Rip CDs.  
Listen to music.  
Watch vidoes/DVDs.  
Scan and print.  
Spreadsheets.  
Presentations  
Newsgroups.  
HTML editing.  
Games like Chess, Tetris, all kinds of solitaire, etc.  
Make videos.  
Download photos from a camera and organize them.  
Translations.  
Use a dictionary  
Learn how to touch type.  
Edit images.  
Send and receive a fax.  
Take screenshots.  
Create .PDF files.  
Create and use a data base.  
Instant messaging with over 10 different programs in one including Windows Live

## Re: Only 16 More Days to Go

Messenger.  
IRC.  
Bluetooth.  
Torrent.

and much more!

What you can't do with Ubuntu:

Run some MS or other niche programs like AutoCad. Most video games won't work with Ubuntu either so if you're into games, dual boot with XP.

Or worry about:

WPA and WGA raising their ugly heads,  
DRM,  
Viruses,  
Root kits,  
Spyware,
