

What has happened to my Task Manager?

This morning, I opened up the Task Manager and noticed that there are no longer any options such as Applications, Processes, Services, Performance, Networking, and Users (those tabs are no longer available).

In addition File, Options, View, Windows, and Help at the top has disappeared also.

Also, the minimize, maximize, and close out buttons have disappeared in the upper right hand corner, so I can no longer minimize or close the task manager window. However, when I switch to a different user, the task manager window is normal and all those options are there.

I would perform a system restore to a date and time of last night at 11:00 pm or sometime yesterday, but I was having trouble with my internet connection last night and yesterday and I'm afraid if I go back a day in system restore, I will lose my internet connection again because Belkin had me change some settings yesterday and last night that allowed me to stay connected to the internet. Is there any way around using system restore?

13535

Thanks,
Tonya
