Let me answer my own question.

Unplug or USB storage devices and disconnect from the network (unplug the cable) then everything will work. At least it did in my case without any problems.

I have the following problem:

I am trying to install Vista in another partition of my harddrive but every time I do it after the first reboot I get the ndis.sys missing or corrupt message.

I have tried to copy it from my other vista, reinstall, repair, format and install – nothing works so far.
Please help.
