What motherboard do you have?

Hi guys,

I'm having problems trying to install Vista x64 Ultimate on my G33 Express machine, which utilizes the ICH9 controller for the SATA/AHCI capabilities. I've got a single WD Raptor 74GB connected to port 1, and am trying to install Vista x64 in either SATA or AHCI modes.

Scenario 1: SATA x64

When I attempt to install x64, it will notify me that no drives are found. I opt to load drivers, and try to provide Intel's Matrix Storage Manager v8.7.0.1007 files, v7.8, or even the x64-floppy, but they don't seem to provide SATA drivers for x64.

Scenario 2: AHCI x64

When I try to set BIOS to AHCI mode instead and restart the Vista install process, this time I'm confronted by a message that indicates that unsigned drivers are not supported in x64 and kicks me out.

Scenario 3: SATA x32

When I try x32 install instead, Vista still doesn't find any compatible Intel drivers, and no drives are found.

Scenario 4: AHCI x32

Vista will accept the SATA driver provided by Intel, but still no drives are found. The Raptor does not have any problems being detected in BIOS.

Re: Vista x64 install SATA/AHCI signed driver problem

Starting to run out of ideas...any help would be appreciated, thanks!
