what should I do I am having trouble sending my email  
messages. I am getting output.exe error-8

What are you using to send mail with? You may have a trojan horse installed  
and should run some antivirus software. Do you have any, what is it and is it  
updated?

Also some antispysware software, in case the trojan horse is spyware  
instead of a virus.

Well the filename is legit in some instances but the trojan showed up first in a search.
