You're not even close to having your AOL account configured in Windows Mail correctly. See Dave's reply.

Demosthenes wrote:

I've always had problems with emails to and from craigs list. Its like /i need to download some craigs list translator program or sign up and pay to use it, or some other bull to deal with. Anyway I've been through 2 computers and eah with their own problems, I've had a toshiba, I can sent outgoing mail, but I can read craigs list emails, this computer is the same except I can send outgoing emials to people on craigs list or use windows email, I use AOL and yahoo equally, I prefere to use AOL to respond to craigs list because thats where I send my junk mail. my email address is rapdogztor@xxxxxxx and it wont let me send outgoing emails. The error message loks like this:

The host 'SMTP' could not be found. Please verify that you have entered the server name correctly.

Subject 'Grant help, new innovative technology concerning energy conservation and transportation', Account: 'pop3', Server: 'SMTP', Protocol: SMTP, Port: 465,  
Secure(SSL): Yes, Socket Error: 11001, Error Number: 0x800CCC0D

I do not have an account with ATNT, and I can log on to get the correct outgoing port, Im using 465 because someone else asked a similar question and thats what the helper told them, or so I hear. I turned on the verification thing, so now what?
