You don't mention the file type nor the aspect ratio specified in the video. Or – is that a problem for all playback?

--
Speaking for myself only.
See <http://zachd.com/pss/pss.html> for some helpful WMP info.

Hi!

Oh yes: there a million posts that say NowPlaying->More Options->devices-

Devices->display : Properties and CHANGE

Only the shape of the ellipse changes most obligingly.
But I want to change the aspect ration of the VIDEO.

The one that made me look for this was a Cinemascope movie showing up all squished.

I thought it was a incorrectly made DVD (?) copied from Video tape. I tried ohter DVDs, but all are the same. WMP says Digital Media may restart, but nothing like that happens.

No player can play in the correct aspect ratio.

But GMPLAYER.EXE can play it in Cinemascope, and change the aspect ratio between 16:9, 4:3, 2.35:1, and original. GMPLAYER is originally for Linux.

So it is not my graphics card.

I hopefully tried 'Run as administrator' when nobody was looking, but nothing happened.

Re: Windows Media Player Aspect Ratio

Is wmp 11 fixed at 4:3?

I have updated my Vista Home Premium to just before SP1 : ie that is the only update pending. (435 MB!!!!)

Wonder if there is a solution? or at least an explanation.

Regards,

Mohan
