sorry, i forgot to mention it is a cable modem. I do have a public IP address, no need for a password. (the 192.168.0.102, is the address given to my comp by the (wifi) router.)

I am not sure whether it is a static address or dynamic. But starts with 63.x.x.x

Still, don't understand why this would not affect my other computer, though, if something was up with the router or the cable modem. hmm, puzzling. Mind-boggling.

Thanks again.

Definitely sounds like your ADSL modem is in router mode. You are adding an extra (wifi?) router behind the ADSL modem, then you AT LEAST have a double NAT.

You could have and additional NAT layer if your ISP is giving you a private address (usually 10.x.x.x) instead of a public internet address. This is usually not the case, but I have seen this happen woth some el-cheapo ISPs.

If this were my network I'd put the ADSL modem in bridge mode and set the router to PPPOE and try from there. Do you have the password to change the ADSL modem config? Do you know your PPPOE user and password? Maybe you can contact you ISP and tell them that you have set up a wireless router and that you want to reset the ADSL modem to bridge mode. They should be able to help you if your contract allows more than one PC.

"Fly" wrote:

You mean 192.168.0.102...(i set the ports for this also in the router).  
I'll have to post the ipconfig /all later as I don't have access to my computer at the moment.

RE: Cannot set up 3rd-party ftp server on VISTA

I believe the router is DHCP configured, I would have to check that as well.

But wouldn't this also affect my other XP computer running on that router?

Thanks,

Den

What IP address does your ADSL modem serve via DHCP?

Please post the output

from ipconfig /all. If your ADSL modem is in router mode instead of bridge mode then you have to port forward that too.

Regarding your router, how do you configure the WAN adapter? DHCP or PPPOE?

"Fly" wrote:

127.0.0.1 works, I see my files. (I assume this is what you meant by localhost?)

But ftp://(my ISP address x.x.x.x) does not work, neither in the explorer, nor in the FTP client SmartFTP.

Directly connected to the modem (without router) does not work.

But my other computer's FTP server is working fine, so the ports in the router were set the right way.

It is also showing 0.0.0.0:21 and some other 50000-50004

Windows firewall is off, so no ports to be set there I suppose.

And even when turning off the McAfee firewall, I cannot get through.

RE: Cannot set up 3rd-party ftp server on VISTA

0.0.0.0:50000 means it accepts connections from all the network adapters.

Have you tried moving it to port 21 just for testing purposes? Remember that FTP uses two ports, and usually the firewall has to be FTP-aware.

Have you tried connecting to the FTP server from the LAN side? What about localhost?

I have a problem setting up ftp server, such as serv-U or Bulletproof FTP on my new computer running Vista. On my old one I could set it up in 5 min. This is also still working, so my router is not the problem. I have McAfee, but I gave the program full access, no other options available, even when

RE: Cannot set up 3rd-party ftp server on VISTA

turning  
McAfee  
firewall off,  
no  
connection.  
Windows  
firewall is  
turned off.

It has to be  
a Vista  
security  
issue. Does  
anybody  
have ANY  
idea. I do  
not at  
this point.  
In Windows  
defender  
you can see  
networking  
component  
or  
something  
like this,  
and the  
Serv-U,  
SmartFTP,  
or  
Bulletproof  
show up but  
it seems  
they  
are not  
listening on  
a specific  
address.  
Just  
0.0.0.0:50000  
etc. and no  
foreign  
address.

Can anyone  
help me?
