Does anyone have any ideas on fixing System Restore or SystemPropertiesProtect.exe and making sure that the computer will not have recurrent disk problems. I have only using the chkdsk option (1) auto fix file system errors not (2) scan for and attempt recovery of bad sectors because the chkdsk log shows only 4kb of bad sectors.

You definitely have to contact your vendor's support and get them to fix the problem or replace the computer.

Don't play with this yourself when it's covered by warranty.
