Just saw the following posted by Sam, do you have uac off?

"Hi all. Well I finally found the answer. I found another person on the net who had the same problem and someone posted and gave the answer. That person had uac off like me and the answer given was. You cannot install a network shared printer with uac off. So I turned it back on and it worked. Hope this helps someone.

Run Add Printer as administrator

printui /ip or printui /il on Start Run

Or right click Add Printer Run as administrator

Seems odd though I have exactly the same setup but both are dual cpu's and have no trouble. Other than verifying you are administrator via control panel, I don't know what else to say. This Vista print subsystem is really quirky and

Re: Problem with sharing a printer in VISTA

the messages so indescrptive you don't know what to do. You might call your pc maker I think they are your first level of support and it should be free if you just bought your pcs within a year, but they usually refer you to the printer maker as having a driver issue, but it may prove fruitful talking to both anyway.

"Opsimist" <Opsimist@xxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:6495043E-BEED-425B-8057-EC993D321F33@xxxxxxxxxxxxxxxxxxxx

I get the message after finding the printer and selecting it.
And yes, I can connect to the printer directly, and I downloaded the updated drivers for vista.
I guess that the main problem would be if i can figure out why i get the "access denied" message, knowing that i'm runnig as administrator on both computers.

"Patrick C" wrote:

Can you add the printer if connect the printer directly to the laptop? I'm thinking something may have gotten corrupted maybe a bad driver can you re-download the Vista drivers and try again? Or else do you have any restore points you could go back to?
