Sounds like you are experiencing the problem discussed in the following KB article:

Q326098 FIX: Windows Forms Application Does Not Start When You Debug
<http://support.microsoft.com/?id=326098>

#Got a simple, single form VB.NET test application that builds with no
#warnings or errors.

#If I Start without Debugging (Ctrl+F5) the application runs with no
#problems, but if I select any of the other options, i.e. Start, Step Into,
#the IDE hangs.
#

RE: Unable to debug VB.NET Windows Forms App

microsoft.public.vsnet.debugging: RE: Unable to debug VB.NET Windows Forms App

#If I fire up the task manager, my application has started, but there's no
#CPU usage for either it or devenv.exe, and its memory usage sits at 60k
#forever. The only course of action I can take is to kill the processes.

#I'm running XP SP1 with all the latest patches/fixes and I'm in the
#Administrators group so I don't think it's related to security permissions.

#I've noticed a couple of posts with similar problems – can anyone help me
#out?

#Cheers

#
