Try this...

Open the break point window ctrl+alt+b and delete all the break points you have.

Then put a couple of them in the code area you r working on. this improved the speed for me. Looks like having too many active break points slows down the debugger even if they are non in the coide are you are currently in .

This may happan if you are working on a big project and debug various sections of the application.

Hope this helps.

Sachin
