I'm trying to debug an app in Visual Studio .NET Version 1.1.4322 SP1. Here is the MDE Error I get...."Error while trying to run project: Unable to start debugging on the web server. Could not start ASP.NET or ATL Server debugging. Verify that ASP.NET or ATL Server is correctly installed on the server."

Note:

1. I did try to install Visual Studio .NET before IIS. (very bad, I know)
2. I have uninstalled VS, installed IIS, reinstalled VS again and again
3. I keep getting the same error. Am I doomed forever because I ignored the installation order of precedence? PLEASE HELP!!!
