Hi,

I've been testing several profiler tools. After uninstalling them I get the message

"Changes are not allowed when the debugger has been attached to an already running process or the code being debugged is optimized."

I have already tried the resetting hits described in <http://forums.microsoft.com/MSDN/ShowPost.aspx?PostID=124249&SiteID=1> .

It is definitely not a user dependent settings problem – I created a new windows xp user. The problem also occurs there.

I'm getting mad...

Thanks for your help

Fabian
