Recently i'm getting an IDE error saying "Microsoft visual studio is busy

Microsoft visual studio is waiting for an internal operation to complete. If you regularly encounter this delay during normal usage, please report this problem to Microsoft" and the IDE totally hangs up. I referred to the previous posts, but could'nt get any thing relevant to my app.

Just in case, have you tried to disable symbol server access?

(Remove references to the symbol server from Tools | Options | Debugging | etc. (symbol path settings) and from _NT_SYMBOL_PATH environment variable)

But here's a point to note. I debugged it many times and it hangs only at a particular function call. This function just retrieves some information from an xml file. The debugger stops exactly at the function call with out even starting executing the function. I'm not able to anticipate what could be wrong.

And one more thing to note is the app runs fine with out break points.

It this application managed or native? Is it multithreaded?
