My compiler is acting up. When I have building error, the left margin pointer will point to the wrong line. Sometimes, the deferent between the line that has the error and the line it pointed to can be more than twenty lines.

Sometimes, It will give error message for something that I commented (//).

As soon as I delete the commented line, the building error will disappear .

I uninstalled the compiler and install it again: I still have the same problem.

I used to have version 2005, I Uninstalled it and I still have the same problem.

I recently installed the service pack recommended for this compiler.

I wonder if any body has experienced something like this, before. Or anybody has an idea; what is the reason for that and how can I fix this problem; I would appreciate it.

I recently installed the service pack recommended for this compiler
