- 

I got error message when trying connecting to remote debugging machine using Visual Studio 2005's Attach to Process, it said "Unable to connect to the Microsoft Visual Studio Remote Debugging Monitor named 'machine\_name'. The data area passed to a system call is too small."

I've been following Microsoft instruction at <http://support.microsoft.com/kb/910448> and successfully connected using Native only with no authentication mode. But no luck with Windows Authentication mode, I tried both machine\_name and Domain\User@machine\_name format in the Qualifier field to no avail. These two machines are in the same domain and I have admin rights.

Has anyone experienced this problem?
