Greetings,

I have been using and continue to use VS 2005 Team Suite. I can debug both Web Applications and Web Services in that IDE fine.

I recently installed VS 2008 Team Developer. In that IDE I can NOT debug either Web Applications nor Web Services. After clicking "Start Debugging (F5)" the Output Window indicates the IDE attached to aspnet\_wp.exe – succeeded. which loads several assemblies. but then instead of popping up a browser (like it is supposed to, and VS 2005 does) it pops up Notepad.exe and a Notepad error dialog saying "The filename, directory name, or volume label syntax is incorrect."

I can not find what: filename, directory or volume label it is having problems with.

And if this is having trouble, why does 2005 not? They are installed on the same workstation so all the filenames, directories, and volume lables should be the same.

I have tried to "Repair" the install.  
Uninstalled  
Reinstalled

Can anyone help me locate the problem.

Thanks much,  
—  
Brian
