Hi,

I am trying with MS SQL Server Reporting Services. On my client machine i am installing VS.NET 2003 (framework 1.1). The SQL server is on a different machine with SQL Reporting Services installed on it.

In my client machine where i have just installed the VS.net 2003 installed i do not get the "Business Intelligence Project" type using which i can author reports. Is there any patch i need to apply to VS.NET 2003.

Can somebody tell me how i can author reports from my machine which neither has SQL Server.

Regards,

Pugaz
