If anyone is interested, I did stumble accross a blog entry that Chris Kunicki had from Nov 2003

(<http://216.239.41.104/search?q=cache:w-y2iSLW7WQJ:blogs.officezealot.com/chris/archives/000025.html+Word.Document+Variables&hl=en>), where he used the Document Variables! Which when accessed through XML is stored like this:

```
<w:docVars>
<w:docVar w:name="MyXML" w:val="&lt;Config&gt;&lt;var1&gt;True&lt;/var1&gt;
&lt;var2&gt;False&lt;/var2&gt;&lt;/Config&gt;"/>
</w:docVars>
```

Thanks, Chris! (If you're out there reading this ;-).
