Hi Vaidy,

I have already performed some research on this issue. As I replied in my previous reply, such a problem is caused by the corruption of the .NET Framework in most cases. The general resolution to this issue is to reinstall the corresponding .NET Framework. I also found another cause of such problem which the .NET Framework's directory has been moved or renamed, but it is obviously not your case.

We do understand your concern on this issue. Tim just mentioned this problem occurs right after your machines installed some patches or updates, but we don't know which patches or updates applied to your machines and caused the problem, so we cannot repro the problem on our side. Would you please tell me which patches or updates applied to your machines in last week?

Thanks!

Best regards,

Gary Chang
