Run aspnet\_regiss /i with the 2.0 command prompt. That should get rid of all references to 1.1 in IIS. If that does not work, post back and we will go back to the drawing board.

In theory it should have just 1.1 installed on it. Only 1.1 shows up in the installed applications list. I don't \*have\* to have 2, I just need a stable 1.1 dev env, which is what I had before I upgraded to VS2005/2.0. I'd just like to get back to that without a reformat.
