Hi there.

From one moment to the other I can't add most of my 3rd Parts controls to my VS2005 solution. It works if I do a new project and drop a control an empty aspx.

Although it breaks with an error if I try it in my original project. This bug is often described on the internet but I haven't found a proper solution for it.

I definitely haven't seen a bug fix from Microsoft for it. I even installed the VS 2005 service pack beta, without success.

I case anyone already fixed this problem, please let me know.

Elmar
