Well, now that you mention it, I have always thought it was odd to add new windows on the left and not on the right. These days I hardly think about it though. Anyway, I did a Live search and did some poking around in the Registry, but I can't seem to find anything that'll let you change this behavior.

I mean interface of the VS 2005 itself. Every time I open a class, form or other module, it rearrange the main tabs (with class, form or other module) order. I'd like the tab to be added to the end but not to the first place when is being opened.

And can I also increase the maximum tabs number shown on the bar?

Is there a setting or registry key?
