Larry,

Is the path still pointing to 'c:\Microsoft.visualbasic.Targets'? You can manually edit the project file to point to the correct path 'C:\WINDOWS\Microsoft.NET\Framework\v2.0.50727\Microsoft.visualbasic.Targets'.

```
<Import Project="$(MSBuildBinPath)\Microsoft.visualbasic.targets" />
```

Apart from that, I have no idea why this is happening, I have never had this problem.

Were you trying to do something similar to:

[http://blogs.msdn.com/jomo\\_fisher/archive/2005/08/31/458658.aspx](http://blogs.msdn.com/jomo_fisher/archive/2005/08/31/458658.aspx)

Hope this helps,

Steve – dotneticated.com

I tried to create another web application,  
the first problem has surfaced again.

It seems that when I clean out  
C:\Documents and Settings\MyLogin\Local Settings\Temp  
the "target problem" goes away, (the first time I try to create a web  
app.)

An subsequent attempts at creating a web app  
I get the target error message again.

Thanks Again,  
Laurence

Laurence,

Re: New to ASP, trying to create a new project

Visual Studio has it's moments, but this error should not be occuring.  
And no, it's not THAT buggy.

The first thing that concerns me is the path for  
Microsoft.visualbasic.Targets, given your framework version, should be:  
C:\WINDOWS\Microsoft.NET\Framework\v2.0.50727

It sounds like something, most likely the .NET Framework itself, is not  
installed correctly.

Hope this helps,

Steve – dotneticated.com

[news:OyGrMqG7HHA.3716@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:news:OyGrMqG7HHA.3716@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx)

I am in Win XP pro, fully patched.  
Using Visual Studio 8.0.50727.762 (VS 2005)  
and .NET Framework 2.0.50727

When I try to create a new ASP.NET Web Application  
project  
I get:  
"Exception of type 'System.Exception' was thrown"

I came up with nothing searching with google.

And then sometimes I get a message:  
C:\documents and  
Settings\Mysignone\localsettings\temp\bto5wgau.wgx\temp\webapplication6.  
vbproj(120.11): The imported project  
c:\Microsoft.visualbasic.Targets"  
was not found  
Confirm that the path in the <import> declaration is correct  
and that  
the file exists on disk.

Is visual studio .net 2005 this buggy.

Thank you for your help.

Laurence
