I created several stored procedures inside of SQL Server 2005 Studio Managment, but I cannot view the stored procedures inside of Visual Studio 2003. When I add a SQL data connection in VS 2003. I can see the tables but no stored procedures. The DBA gave me create procedure premission. I have installed Visual Studio SP 1 and I have show objects owned by any user checked

.

I cannot view any stored procedure inside of Visual Studio 2003 that was created in SQL Server 2005
