Hello Sascha,

How are you doing?

Have you got any progress on this issue? Regarding on this issue, since it is quite specific to the actual environment, due to the newsgroup support limitation, if you need rapid and tight support or troubleshooting assistance on this, I would suggest you consider contact CSS for regular phone support service.

<http://msdn.microsoft.com/subscriptions/support/default.aspx>.

Anyway, please feel free to post here if there is still anything we can help you.

Sincerely,

Steven Cheng

RE: SSIS and Reporting-Designer does not paint correctly at Dual-Monit

Hello Sascha,

From your description, you're using VS 2005 IDE to develop some SQL server

2005 BI stuffs and encounter some displaying issue at design-time when using dual-monitors, correct?

According to your problem description, I've performed some research in former issue records and seems haven't found definite record or existig issue about the SSIS or SSRS designer with dual-monitors. Most of the existing issues are with the "Properties window" or some document tabs and seems have been fixed in VS 2005 SP1. For the problem you met here, it maybe a environment specific issue. Would you also have a try on the following things to further verify the issue:

** Whether the same behavior always occur when you design any other(or very

simple one) SSIS and Reporting service stuffs in designer view

**Whether the two monitors are configured identically , such as "screen resolution"...

** If possible, I suggest you also try a different monitor to see wheher the problem is also hardware or driver related.

Please feel free to post here if there is any other findings on this.

Sincerely,

Steven Cheng

Dual-Monit

Date: Mon, 1 Oct 2007 02:41:00 -0700

Hello ng.

The designers of SSIS and ReportingServices does not paint correctly on

my

second Monitor.

If I move the Visual-Studio to the first monitor the objects appear

right.

But if I move it on the second monitor, I get empty objects or the

dialogs

are painted over the objects. I have to move an explorer-window over the objects to paint them correctly.

Is there any fix for this problem?

I have installed Visual Studio 2005 SP1 and SQL-Server 2005 SP2. My graphics-card is an Intel 910 GL Driver Version 6.14.10.4543 (latest I

have

found)
