Thanks. I did call Microsoft last night after not seeing any responses to my post. I should be getting a call this morning to resolve.

Suddenly this error occurs anytime I debug a ASP.NET web application or site.

I have even uninstalled and re-installed VS and it still happens. I am basically unable to do anything at this point. Has anyone experienced this or know how to fix? It is very urgent since I can't do anything until I resolve.

Thanks

If it's that urgent, I suggest that you use one of the free technical support incidents that you got with the purchase of VS. If your company purchased it for you, seek out the responsibly party in your company to find out how to use a technical support incident.

<http://support.microsoft.com/selectindex/?target=assistance>

Find your version of VS in the list and click on the link.
