I never said its not needed or not wanted by others.
I explained my opinion about whether it is needed or not.

MS has decided that its not needed and hence they designed VS IDE it as it is.
I think one of MS people should answer to this thread about the design decision they have taken and the reason behind it.

Sometimes they keeps quite to encourage more and more Arguments. Better to stop these arguments by explaining the actual reason behind this behaviour.

Come On guys, wake up and explain.

Just because you don't see a need for it doesn't mean it's not needed/wanted.

Be seeing you.
