

Truncating Parameters in VS.Net 2003

I have some stored procedures that accept a text parameter (specifically I am sending an XML string). If I run the stored procedure in Query Analyzer, everything works perfectly. However, the parameter is truncated after about 10 characters in the following scenarios from VS.Net.

- 1) Right Click on sproc in VS.Net Server Explorer. Fill in parameter when prompted. Choose OK. Sproc runs, but SQL Profiler shows truncated parameter
- 2) Use Preview/Data option when building a SQL Report Services report. sproc runs, but SQL Profiler shows truncated parameter.

This was working awhile back. Not sure what upgrade caused the issue? Was there one? Is there a setting I need to change/modify/update?

Thanks for the help.
