Hi Gary –

I now have the new instance connecting in VS. How? –In Enterprise Manager, I added a new login for the new MSDE instance, choosing SQL Server Authentication instead of Windows, then under DatabaseAccess tab, selected databases and made this user "owner".

In VS, I unregistered my new instance of MSDE and then re-registered it, and immediately it became available. I thought it was going to ask me for login and pw, but it didn't.

Try as I might, I cannot get the connection to my SQLServer instance working.

Do you think I should try re-installing SQLServer, instead of reinstalling SP2?

Gwenda
