It's the folder "/test2" that is set to executable, not the default web site. Change the setting for this folder to Script only.

FrontPage 2002 can also give you a similar problem if the folder is marked as Write. Uncheck this too if necessary.

If you still have trouble with the FP 2002 extensions, then use FTP instead. In my opinion, FP 2002 extensions should have been scrapped a long time ago.
