Is your department a MSDNAA member? If so, you can get excellent help for  
your situation by asking in the MSDNAA newsgroups:

microsoft.private.msdnaa.dotnet  
microsoft.private.msdnaa.general

If not, perhaps you should suggest a membership  
(<http://msdn.microsoft.com/academic/>).

microsoft.public.vsnet.setup: Re: Visual Studio .Net for a large scale college classroom deployment

I'm sorry not to have the details for you, but you can set up students in the developer users group and the debugger users group to give them access to most VS.NET features without making them administrators.
