Some experiences for your first question :

I've installed the SQL 2005 Developer Edt. and when I try to install the VS 2005 Pro it tells me that I must remove some Beta components. I don't have any Beta components so I assume it detects the SQL 2005 Developer Edt. as a Beta component.

So now I need to remove the SQL 2005 Developer Edt., and then install the VS 2005 Pro. Hopefully it will work.

Is the SQL 2005 Developer Edt. not compatible with VS 2005 PRO ?

All installs are RTM.
