First of all, I apologize if this is the wrong forum for this, however,

I am searching for a candidate for the following position:

We are currently seeking a Web Systems Analyst for a permanent position in Mt. Laurel, NJ.

Will design, implement, and administer web-based solutions for Web applications and Internet/Intranet based Web Sites. Work with and provide architectural directions to on-site and off-site web development teams as the subject matter expert (SME) on development projects. Work with external web site hosting vendors as one of the main points of contact for ensuring successful deployment and maintenance of corporate web sites.

JOB FUNCTION:

- Responsible for the architecture, design and development of all Internet and Intranet applications.
- Work closely with Marketing, Alliance and regional business units to conceptualize, design, develop, implement and maintain multiple web technology related projects that vary in scope, size and complexity
- Work with and manage relationships with outside service and hosting providers.
- Create and enforce standards, best practices, and improved deployment strategies.
- Act as primary point of contact and troubleshooter for web systems and application issues.
- Recommend improvements of user interface (UI), performance, reliability, security, and search-friendliness of Internet applications.
- Work with on-site and off-site developers to manage deliverables, integrate code, and develop subject matter expertise.
- Keep abreast of new emerging technologies such as .NET (C#), .NET Web Services, AJAX, BizTalk 2004/2006, and SQL server 2000.

Web Systems Analyst–Permanent Position–Mt. Laurel, NJ

- Recommend directions on architecture, security, and load balancing configuration of clustered web farms.
- Facilitate capture & reporting of web site activities such as trends, hits, etc.

QUALIFICATIONS:

- Requires 6–8 years full life cycle web site development experience (Intranet/Internet/Extranet) for high transaction volume large scale applications.
- Knowledge of Web Technologies, Web standards (XHTML, CSS, JavaScript), SEO Standards.
- Exceptional hands–on experience with HTML, DHTML, CSS, ASP.NET (C#), and JavaScript.
- Exceptional experience in designing and developing using Web Services, XML, XSL technologies.
- Experience in ADO.NET, SQL Server, and scripting for web–based utilities required.
- Experience with superior UI design concepts, 'branding', and personalization required.
- BizTalk, Active Directory experience is preferred.
- Knowledge of Web Farms, Load Balancing, and DNS Round Robin is required.
- Should possess clear understanding of SSL technologies.
- Knowledge of SSO, Federated identity is a plus. Knowledge of web services, W3C Security standards is preferred.
- Should have clear concepts in IIS 5.0/6.0 and Windows 2000/2003 environments.
- Should have experience in Configuration Management & Website deployment.
- Bachelor's degree highly preferred
- Strong interpersonal, problem solving, decision–making and project management skills required.
- Excellent teamwork and good oral/written, communication and presentation skills required.

If you are qualified and interested in this opportunity, please send an updated resume to pbrle...@xxxxxxxxxxx If you are not interested, but may know of someone who may be, please forward them my contact information.

Thank you.
