Hi,

I can't set a UDT as Public.

The following code is basically what I want to achieve.

```
=====
currentuser.bas
=====
Public Type currentuser
  P1 as String
  ...
  ...
  P10 as String
End Type

=====
Form1.frm
=====
' I can only Dim CUSR, can't Public CUSR
Public CUSR as currentuser
Private Sub loginbutton_Click()
  CUSR.P1 = "something"
  ...
  ...
  CUSR.P10 = "here"
End Sub

=====
Form2.frm
=====
Private Sub commandbutton1_Click()
  Print Form1.CUSR.P1
End Sub
```

Basically, I want to have a Gloabl UDT so that I can assess it in any form.

microsoft.public.vstudio.development: How to set UDT as Public so that I can assess it anywhere?

Is it possible to do that?
