As I wrote in my previous message, I have removed the Editor setting, which wasn't pointing at Notepad anyway. Only viewing ".txt" files cause Notepad to be opened, all other types of files are correctly printed to the console. I don't even have Notepad associated with ".txt" files in general. I have searched through srcsafe.ini and ss.ini for occurrences of "txt" and there are no associations to be found. When I right click on the file in the SS Explorer, it asks me if I want to view it with the SourceSafe editor or the registered application, which is correctly stated to be TextPad. No mention of Notepad anywhere except in the list of file extensions that are always opened with Notepad, but txt is not in that list. Strange!
