Hi Joe,

The two dropped versions have dates of 4/1/2004 and 7/1/2004. There are older and newer versions that did not get dropped during either the archive or the restore. The oldest listed version has an 11/08/01 date and the newest version has 9/16/04. Here are the steps:

- 1) Connected to a production database, and looked at the history of a specific file and saw 17 files listed
- 2) Archived the folder containing the specific file
- 3) Restored the folder to a test database
- 4) Connected to the test database and looked at the history of the file and saw only 15 files listed.

Thanks,
rpfeet

When restoring the archive file to a test database a History of the file shows the number of file versions decreases to 15. Shouldn't an archive be an exact duplicate*
