Hi Folks

One of my DC's came up with this error – "The File Replication Service has detected that the replica set "DOMAIN SYSTEM VOLUME (SYSVOL SHARE)" is in JRNL_WRAP_ERROR."

I ran "chkdsk", restarted the machine, it found and fixed the error. All the services start and the replication monitor says everything is okay. Event log too.

When I run Users and Computers I get an error – "Data is not available from domain controller". The Users folder comes up with the error and empty.

Here is the kicker – everything else is replicating fine.

Any thoughts?

Thanks

Liege
