Use Restricted Groups feature of Group Policy to make them members of local administrators group on the required servers.

I am looking into what it will take to give our field support staff access to our AD environment. I want them to have full support ability on the servers that fall into their area of responsibility above and beyond of just OU administration. However I do not want them to be a member of the domain administrators group because I only need them to administer a few of the servers. Is anyone aware of MS documentation that explains this in detail? Has anyone ran into this situation themselves, if so what have you done to make it work?

Thanks for everyone's help!

Sincerely,

Michael
