Hi all

How can I allow the local administrator password to logon locally on one of my member servers?

When I try to log on locally as a local administrator on a domain member server I get message "the local policy of the system does not permit you to logon interactively".

I have added the local admin in the Local Policy so that it is allowed to logon locally.

I'm assuming that it is the Domain Policy overwriting the Local Policy.

How can I fix this?

Thanks

RG
