You can remove the Authenticated Users group from the particular OU if you want. that should prevent Authenticated Users from browse the content,.

> OK, I've read the article and made the attribute visible, but I still can't seem to accomplish the task. If I want make users in a specific OU invisible, how do I apply the list object permission? Should I be using "deny" on that permission? My domain container has the "Authenticated Users" receiving the "List Contents" permission... am I to understand that this permission will apply to all child objects even if the child OU does not inherit? Any suggestions are much appreciated...
