**Update:**

Same machine as before. I redid everything, O/S, SPs and IE6 this time, then did Dcpromo and created a new domain. A few reboots later and we are showing no Problems. Hot Damn!

Now I will try IE6 on one of the sick DCs and we will see what happens. If that clears the problem then I will try to make the new machine a DC on our production domain.

But as of now it would appear to be an issue with IE6 vs IE5.5.

Thanks to all for the help.
